Project Name	To Supply Leftover Food to Poor
Maximum marks	2

Problem Statement:

Every day, tons of edible food are wasted by restaurants, hotels, and social events, while millions of people go to bed hungry. There is no organized system to identify, collect, and distribute leftover food in real-time. Manual coordination often leads to delays, hygiene issues, and inefficiency.

Proposed Solution:

We propose *FoodConnect*, a cloud-based application developed on the Salesforce platform that:

- Allows food donors to register leftover food details.

- Notifies nearby volunteers or NGOs instantly.

- Tracks the delivery and ensures food reaches needy individuals promptly.

- Generates reports to monitor donations, volunteers, and deliveries.

The system automates the entire process, reduces wastage, and bridges the gap between food surplus and hunger.
